45 mm Black Magic Air Block, Swivel

Part number 3391

The smallest Black Magic block yet: efficiency, strength and size for boats around 30 ft.

Center cage keeps Torlon roller bearings separated and parallel to reduce friction, and captive Delrin ball bearings carry side loads, so the block trims and releases fast under load. Shackle blocks lock in two directions or swivel to keep line from twisting: a set screw fixes the shackle or lets it swivel. Quick disassembly with a hex wrench, a minimal number of fasteners and no loose balls or rollers make maintenance easy. Side plates are aluminium, hard-coat anodised for durability and to stay looking as black as their name for years.

Specifications

Block series	**Black Magic Air**
Sheave diameter	**45 mm**
Max working load	**1,000 kg**
Max line diameter	**10 mm**
Weight	**150 g**

Illustrative demo document. Values are examples, not a Harken specification.
